

INTRODUCING THE NEW ECL2 QUICKCREATE ADD-ON FOR OUTLOOK

We are very excited to release our very own MS Outlook "ECL2 Quick Create Add-On" that we think you'll all find extremely useful. The Add-On allows any user with valid Q-Pulse credentials to capture the details of any email received and quickly drop it into the CA/PA Module of Q-Pulse to be processed.

The User's credentials are stored within the ECL2 QuickCreate Add-On settings, so that the user may initiate a workflow without going into the application.

We know you use your CA/PA Modules for a wide variety of things beyond just capturing CA/PAs. You can use the ECL2 QuickCreate Add-On to capture anything utilizing a workflow within that module.

Receiving email notifications from other systems with data that you'd like to trend? Quickly and easily capture it with the ECL2 QuickCreate Add-On without having to worry about linking systems, keeping fields mapped, etc.

Please contact us for more information at Inquiries@ECL2.com or by calling us at 469.828.5006.
